SUMMARY

Computer Engineering graduate with a strong foundation in Core Java, OOP, SQL and Java backend development. Hands-on experience with JDBC, Servlets, Hibernate/JPA, Spring Boot, with project experience in REST APIs, databases. Seeking a Java Software Developer role to apply and strengthen backend development skills in a production environment.

TECHNICAL SKILLS

- **Core Java:** OOPs, Collections, Exception Handling, Multithreading
- **Advanced Java:** JDBC, Hibernate with JPA, Servlets, JSP
- **Frameworks:** Spring Framework, Spring MVC, Spring Boot, Spring Security
- **RESTful API:** REST API development, JSON, Postman, etc.
- **Frontend Technologies:** HTML5, CSS3, JavaScript
- **Database:** Oracle SQL, PostgreSQL
- **Platforms:** Eclipse IDE, Maven, Git/GitHub, Linux
- **Testing:** Manual Testing

PROJECTS

Employee Management System

- I have created this java-based web application in which we have managed the employee information. We used JSP pages to render the data on server side and for request we used Jakarta Servlets technology.
- The CRUD functionality was implemented in our project. Add, View, Edit and Delete supported by a single form of JSP. Employees got unique Ids automatically from database, and there was a confirmation alert for deleting any employee record.
- For getting recently updated employee we used HTTP Session objects while cookie was used to set default department of employee.
- Tech Stack: Java, JSP, Jakarta Servlets, Hibernate (JPA), PostgreSQL, Apache Maven, Apache Tomcat.

Online Movie Booking System

- I made a RESTful backend API allowing customers to browse movies, showtimes, check seat availability, purchase tickets, and cancel purchases while admins handle movie, theatre, screen, and showtime management.
- JWT based stateless authentication using BCrypt password hashing and role-based authorization where there is a Customer and Admin role such that the customer has access to view his/her booking details.
- The per-show seat reservation (ShowSeat) system allows booking/cancellation transactionally along with proper database constraint checks to ensure duplicate booking cannot happen.
- Tech Stack: Java, Spring Boot, Spring MVC, Spring Data JPA (Hibernate), Spring Security, JWT, ModelMapper, PostgreSQL, Maven, Swagger/OpenAPI, JUnit, Mockito.

JNativeKit (JNK)

- Creating an OS-agnostic Java library which provides a common interface across desktops on Windows, macOS, and Linux to leverage native OS capabilities such as notifications, system tray, auto starting, and credentials management.
- Using Maven multi-project structure, I built this application which has a common API library along with OS specific provider implementations chosen at run-time using Java SPI (Service Loader).
- Capability/result model which defines various result codes like AVAILABLE, UNSUPPORTED, MISSING_DEPENDENCY, and PERMISSION_DENIED indicating failures in unsupported environments, validated using a GitHub actions CI matrix testing.
- Tech Stack: Java 17, JNA, Maven (multi-module), Service Loader (SPI), JUnit 5, GitHub Actions, Git/GitHub, Linux.

EDUCATION

Dilkap Research Institute of Engineering and Management Studies, University of Mumbai [2021 – 2026]
Bachelor of Engineering (B.E) in Computer Engineering with CGPA 7.72, Thane Maharashtra

G.E.I.'s M. H. High School & Junior College, University of Mumbai [2019 – 2021]
Higher Secondary Certificate (HSC) in Bifocal Computer Science with Percentage 75.83%, Thane Maharashtra

IRA Global School, IGCSE [2018 – 2019]
International General Certificate of Secondary Education (IGCSE) with Percentage 60.43%, Dombivli Maharashtra

CERTIFICATIONS

- QSpider – Java Full Stack Developer
